VACCINE FAQs

How was the vaccine developed so quickly?

The COVID-19 vaccine technology had been in development for over a decade. When the pandemic hit, scientists were able to build on this research (with more financial resources than ever before) to develop the COVID vaccines.

Can I get COVID-19 from the vaccine?

No, none of the COVID-19 vaccines that are currently being distributed contain the live COVID-19 virus. Rather, the vaccine prepares your immune system to recognize (and fight) the virus.

Are certain groups being given the vaccine first as an experiment?

There is no experimentation in the vaccine prioritization or distribution plan.

What is in the vaccine?

Pfizer and Moderna published a list of all ingredients, which are currently posted on the FDA website.
